

## TrueGrit®

**TrueGrit®** is the proprietary texture additive uniquely designed to add strength and other benefits for PerfectPrimer and all resin-based coatings.

**TrueGrit®** is the only texture filler that increases the tensile strength of any coating it is added to. Unlike a natural or synthetic stone, it is an organic, pH neutral, cellulose fiber. This fiber combines with all resinous coatings and has no sharp edges that can weaken, cut or tear them.

**How does it work?** TrueGrit® is mixed into PerfectPrimer® in various ratios. This converts it into RubberDecky overlay or PhillyPutty **spackling** paste and crack filler. This is then sprayed, rolled, towed, or brushed onto any surface for your desired purpose or effect.

### Benefits of TrueGrit®

- Adds tensile strength to all resinous coatings
- Increases adhesion of every Overlay to the Primer coat
- Provides a smooth, (not sharp or rough) texture.
- Performs under the most extreme weather conditions.
  
- Builds coating thickness without additional applications
- Non-toxic, environmentally & ecologically friendly
- Remains permanently flexible over time
- Creates a natural concrete textured finish
- Cannot crush or "powder" over time
- Lightweight and economical

**Directions:** To make RubberDecky: mix 16 oz of TrueGrit into each one gallon of PerfectPrimer. To make PerfectPrimer spackle putty; mix a pinch of TrueGrit into a half cup of PerfectPrimer. Add more as desired, until Primer thickens into a spackle paste.

**TrueGrit® the next generation of coatings additives**
